Complex Network Analysis in Python

Recognize → Construct → Visualize → Analyze → Interpret

Dmitry Zinoviev

The Pragmatic Bookshelf

Raleigh, North Carolina

Contents

	Acknowledgments	xi
	Preface	xiii
1.	The Art of Seeing Networks	1
	Know Thy Networks	2
	Enter Complex Network Analysis	5
	Draw Your First Network with Paper and Pencil	6
	Part I — Elementary Networks and Tools	
2.	Surveying the Tools of the Craft	11
	Do Not Weave Your Own Networks	11
	Glance at iGraph	12
	Appreciate the Power of graph-tool	13
	Accept NetworkX	15
	Keep in Mind NetworkKit	15
	Compare the Toolkits	16
3.	Introducing NetworkX	17
	Construct a Simple Network with NetworkX	17
	Add Attributes	23
	Visualize a Network with Matplotlib	26
	Share and Preserve Networks	30
4.	Introducing Gephi	33
	Worth 1,000 Words	33
	Import and Modify a Simple Network with Gephi	34
	Explore the Network	36
	Sketch the Network	38

	Prepare a Presentation-Quality Image	40
	Combine Gephi and NetworkX	42
5.	Case Study: Constructing a Network of Wikipedia Pages	43
	Get the Data, Build the Network	44
	Eliminate Duplicates	47
	Truncate the Network	48
	Explore the Network	49

Part II — Networks Based on Explicit Relationships

6.	Understanding Social Networks	55
	Understand Egocentric and Sociocentric Networks	55
	Recognize Communication Networks	63
	Appreciate Synthetic Networks	65
	Distinguish Strong and Weak Ties	68
7.	Mastering Advanced Network Construction	71
	Create Networks from Adjacency and Incidence Matrices	71
	Work with Edge Lists and Node Dictionaries	78
	Generate Synthetic Networks	80
	Slice Weighted Networks	81
8.	Measuring Networks	85
	Start with Global Measures	85
	Explore Neighborhoods	86
	Think in Terms of Paths	90
	Choose the Right Centralities	94
	Estimate Network Uniformity Through Assortativity	99
9.	Case Study: Panama Papers	103
	Create a Network of Entities and Officers	103
	Draw the Network	106
	Analyze the Network	107
	Build a “Panama” Network with Pandas	110

Part III — Networks Based on Co-Occurrences

10.	Constructing Semantic and Product Networks	117
	Semantic Networks	118
	Product Networks	122

11. Unearthing the Network Structure	127
Locate Isolates	127
Split Networks into Connected Components	128
Separate Cores, Shells, Coronas, and Crusts	131
Extract Cliques	133
Recognize Clique Communities	136
Outline Modularity-Based Communities	138
Perform Blockmodeling	140
Name Extracted Blocks	141
12. Case Study: Performing Cultural Domain Analysis	143
Get the Terms	144
Build the Term Network	148
Slice the Network	149
Extract and Name Term Communities	150
Interpret the Results	152
13. Case Study: Going from Products to Projects	155
Read Data	155
Analyze the Networks	157
Name the Components	159

Part IV — Unleashing Similarity

14. Similarity-Based Networks	165
Understand Similarity	165
Choose the Right Distance	169
15. Harnessing Bipartite Networks	177
Work with Bipartite Networks Directly	178
Project Bipartite Networks	180
Compute Generalized Similarity	183
16. Case Study: Building a Network of Trauma Types	187
Embark on Psychological Trauma	187
Read the Data, Build a Bipartite Network	188
Build Four Weighted Networks	190
Plot and Compare the Networks	193

Part V — When Order Makes a Difference

17. Directed Networks	199
Discover Asymmetric Relationships	199
Explore Directed Networks	201
Apply Topological Sort to Directed Acyclic Graphs	205
Master “toposort”	206
A1. Network Construction, Five Ways	211
Pure Python	211
iGraph	212
graph-tool	213
NetworkX	214
NetworKit	214
A2. Migrating from NetworkX 1.x to 2.x	215
Bibliography	217
Index	221
